DETAILED ACTION

Allowable Subject Matter

1. Claims 91, 93-104, 106, 108-112, 114, 116, and 117 are allowed.

The following is an examiner's statement of reasons for allowance: The claims recite a method of forming a self-supporting, edible film having a uniform distribution of components. The method includes process for making a self-supporting, edible film having a substantially uniform distribution of components comprising:

(a) mixing an edible water-soluble polymer component, water and an active component comprising drug particles to form an edible matrix with a compositionally uniform distribution of said components;

(b) deaerating said matrix by mixing;

(c) forming a wet film from said deaerated matrix by coating or casting the film;

(d) providing a surface having top and bottom sides;

(e) feeding said film onto said top side of said surface; and

(f) drying said film within about 10 minutes or fewer,

wherein said drying step further comprises:

(i) rapidly forming a visco-elastic film having said drug particles uniformly distributed throughout within about the first 4.0 minutes by applying hot air currents at temperatures of about 60°C to about 100°C to said bottom side of said surface with substantially no top air flow to prevent flow migration and

intermolecular forces from creating aggregates or conglomerates of said drug particles thereby maintaining the compositional uniform distribution of components; and

(ii) further drying said visco-elastic film to form a self-supporting edible film having drug particles uniformly distributed throughout.

Zerbe et al ('292) discloses a method of forming flavored film. The method includes providing a polymer component such as hydroxypropyl cellulose, modified starch, flavoring and other ingredients in water to form a solution, i.e. a matrix, coating the matrix onto a carrier substrate such as kraft paper or siliconized polyethylene-terephthalate film (Col 5, lines 36-45) and drying the film with hot air and removing the film after drying (Col 6, lines 43-50). Zerbe et al ('292) is silent as to the active components includes drug particles, applying hot air to the bottom of the substrate with air current's velocity at the bottom is higher than the top or substantially no top air flow to dry the film to rapidly forming a visco-elastic film at a temperature of 60°C to about 100°C and preventing air flow migration and intermolecular forces from forming aggregates or conglomerates of the drug particles to maintaining compositional uniform distribution of the drug particles. Strobush et al discloses a method for drying a coating on a substrate. The method includes providing a substrate with a coating applied to a substrate (Col 8, line 66 to Col 9, line 8), providing a drying apparatus, feeding the coated substrate into the apparatus, where air foils (30) located below the coated substrate direct drying gas, i.e. heated air or hot air, to the bottom surface of the coated substrate (Col 9, lines 44-51) with air bars (34) to supply top-side gas or fresh air for

Art Unit: 1791

added drying or to carry away evaporated solvent or no gas is supplied when top-side gas is not needed or desired (Col 11, lines 15-27) to dry the film without mottle defects, i.e. uniform thickness (Col 12, lines 27-31) or uniform density, which is without forming aggregates or conglomerates with uniform distribution of components. Strobush et al is silent as to the active components includes drug particles, applying hot air to the bottom of the substrate at a temperature of 60°C to about 100°C and preventing air flow migration and intermolecular forces from forming aggregates or conglomerates of the drug particles to maintaining compositional uniform distribution of the drug particles. A search of the prior art of record did not disclose reference or references in combination with recited features.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SING P. CHAN whose telephone number is (571)272-1225. The examiner can normally be reached on Monday-Thursday 7:30AM-11:00AM and 12:00PM-4:00PM.
